Whitespace Waste Software Limited (WSWS) Announces the Implementation of a new Waste Data Management system for Suffolk County Council

Whitespace Waste Software Limited (WSWS) are pleased to announce that they have agreed to implement Power Suite - Disposal a new Waste Data Management system for Suffolk County Council.

Like every Waste Disposal Authority, Suffolk County Council is under increasing pressure to manage data and report on performance in a more efficient and effective way. Tight deadlines have been set by Central Government for areas such as Data Reporting to Waste Data Flow, BVPI's, Local Area Agreements and Budget Forecast Systems. For County Council's to comply fully, information needs to be shared between borough and district councils back to the County Council.

Power Suite - Disposal is a new module within the Power Suite of products from WSWS and represents a huge step forward in technology by allowing information from County Councils, District and Borough Councils and Contractors to be fed to one central location.

Based on the latest web technology, the disposal module enables the automatic collection and validation of information to report against weighbridge and ticket information.

Calum Clements, Suffolk County Council's Waste Data Coordinator says "In partnership with the District and Borough Council's within our authority, Babergh, Forest Heath, Suffolk Coastal, Waveney, Mid Suffolk, Ipswich and St Edmundsbury we will be able to

obtain accurate data in an efficient and effective manner for our reporting requirements by simply installing Power Suite - Disposal.”

Of the order from Suffolk County Council, Phil Garvey Managing Director of WSWS states “We are very excited to be working with SCC on this project. The information Power Suite - Disposal will produce for Suffolk County Council will be of invaluable use.”

Power Suite - Disposal will continually focus on performance and LATS targets information, making the module an invaluable tool for any County Council’s Waste Operation.
